

ShowMatch Installation

The ShowMatch installation is a two-step process. First you should download the self-extracting zip file from the www.teampick.co.uk web-site.

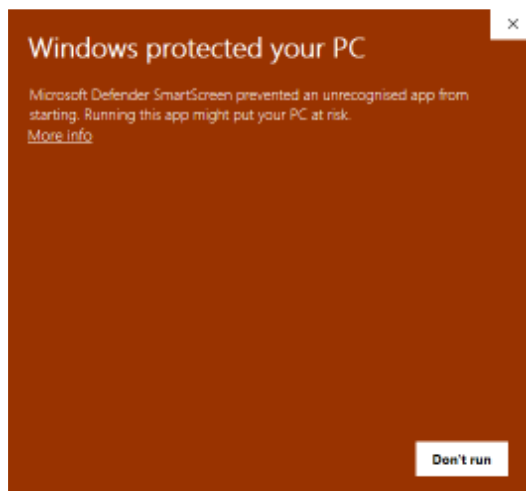

Go to the downloads page and then scroll down until you get to the ShowMatch2 section. You should find the button

Download ShowMatch Self-Extractor

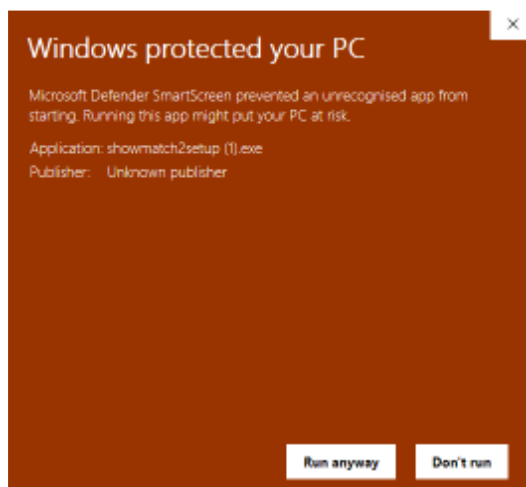

Click on this and the download of showmatch2setup.exe should start. When this has completed click on the setup program and select Run

Windows Defender

At this time Windows defender will probably kick into action

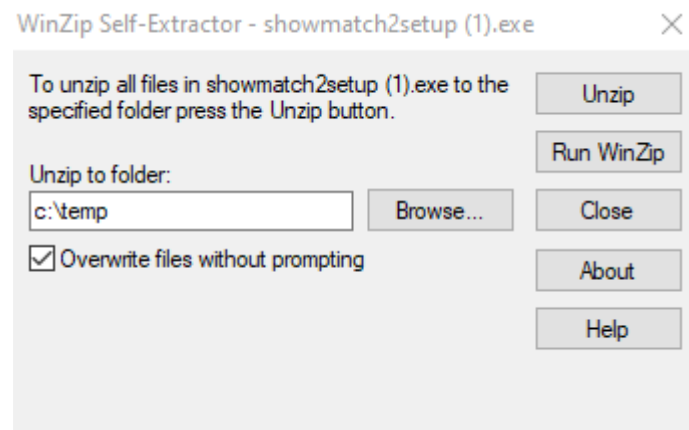

Please click on the "More Info" link

Now click the "**Run Anyway**" button

This should run a Windows self-extractor application (see below)

Click the “**Unzip**” button and this will extract the set-up program to C:\Temp

Run Setup Program

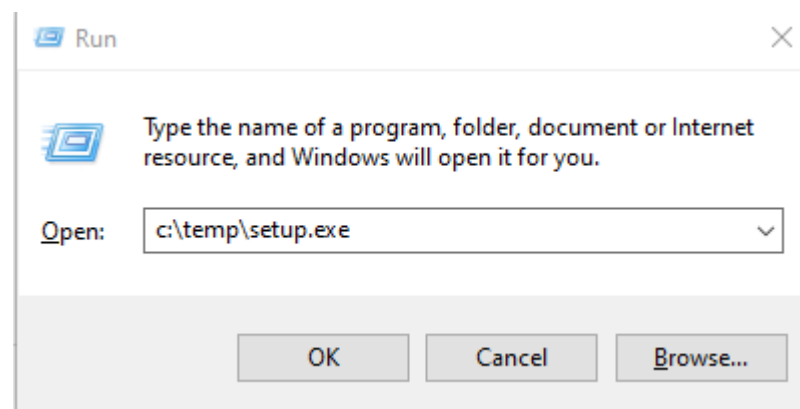

We are nearly there...

The set-up program is now located at c:\temp\setup.exe

If you know how to browse your computer then just go to this location and run setup.

Otherwise...

Press the Windows key on your keyboard (bottom left) and press the “R” key at the same time. This should start the run dialog.

Type in c:\temp\setup.exe as shown and press OK

ShowMatch needs dotnet frameworks 4.7 from Microsoft to run and will install this as part of the set-up.
